001-00002: Users Logging into Account and Placing a Bet

Primary Actor(s):
Registered User, New User, and Bank.

Precondition(s):
Assume that we are looking to place a bet on a sporting event and the user must login through a registered account to apply.

Sunny-Day Scenario:
1. Users will use login widget to login with their username and password.
   a. 2-factor authentication will be used with email or text.
2. Users will navigate through the Big Blue Sports Betting homepage and look through the sporting events occurring this week.
3. Users will select an event to place a bet on.
4. Users will choose which type of bet they would like to place out of the listed options.
5. Whichever selection they choose, it will bring them to the same page where they will place a bet.
6. Users will select confirm bet widget to place their bet.
7. When the user is done with reviewing their courses, they will log out of the website.

Alternate Paths:
1. If a user forgets their username or password, they will have to reset their password.
   a. Text or email used for 2-factor authentication.
2. If a user forgets their password or otherwise needs to reset their password and has changed their phone or email or otherwise cannot access their registered 2-factor accounts: **they must contact the number provided in the "help" tab.**
3. If the app is not working, the user will not be able to access their account to place bets.

Postcondition
The user is logged in and the system has displayed the available sporting events for the week.
